

Anahat One - Project Blueprint

1. Aim & Vision

The primary aim of the Anahat One website is to create a premium, cinematic digital presence that immediately communicates the scale and sophistication of the parent company. It showcases three distinct ventures (Hospitality, Trading, and Hardware) through an immersive, interactive hero system rather than a traditional static grid. The design philosophy is rooted in minimalism, high-contrast typography, and dynamic motion to create a 'wow' factor.

2. Technology Stack

- Backend Framework: Python (Flask)
- Frontend Structure: HTML5 (Jinja2 Templates)
- Styling: Custom Vanilla CSS3 (No external CSS frameworks to maintain maximum control and bespoke design)
- Interactivity: Vanilla JavaScript (ES6+)
- Typography: Google Fonts (Work Sans & Poppins)
- Architecture: Monolithic Flask App serving dynamic templates and a REST API for the contact form.

3. Core Requirements & Features

- Cinematic Hero System: A custom-built JavaScript carousel engine that supports mouse dragging, touch swiping, and keyboard navigation.
- Dynamic Color Themes: Individual carousel cards feature unique, vibrant gradients tailored to their specific venture (Taupe for Hospitality, Navy for Trading, Slate for Hardware).
- Atmospheric Backgrounds: Full-screen background images that smoothly fade and slowly zoom (15-second cinematic zoom) based on the active carousel card.
- Responsive Design: Fully optimized to fit exactly 100vh on both large desktops and smaller laptops without forced overflow scrolling.
- Theming Engine: Built-in Light and Dark mode toggle with persistent local storage and CSS variables.
- Interactive Navigation: Desktop navigation that perfectly centers itself, and a mobile-friendly side panel.
